50 Things to See on the Moon is the latest addition to the extremely popular 50 Things to See with a Telescope series. Like the other books in the series, this edition features "telescope view" which shows exactly what you can expect to see through your telescope or binoculars.

Why observe the Moon at all? The Moon is our nearest neighbor in space, it's easy to find, it's bright, and you don't have to go anywhere special to view it. Astronomer John A. Read has selected fifty of the best things to see -- organized by the phases of the Moon. As each day passes, an additional slice of the Moon becomes visible. With each slice comes new craters, lunar seas, and jagged mountains. This book is perfect for the first-time stargazer who is curious about what is up there.
