By incorporating physical exercise into the learning process, the Math The Multiplication And Division Strategy Based Multisensory Fitness Game aims to activate different parts of the brain, leading to better retention and understanding of math concepts.

How does it work?

The Math The Multiplication And Division Strategy Based Multisensory Fitness Game consists of a set of interactive activities and exercises that are designed to reinforce multiplication and division strategies. These activities can be played individually or in groups, making it suitable for both classroom settings and home use.

The game utilizes a combination of visuals, auditory cues, and physical movements to engage multiple senses simultaneously. This multisensory approach helps students grasp math concepts more effectively by connecting abstract ideas to real-world experiences.

Each activity in the game is carefully designed to align with specific multiplication and division strategies. Whether it's using manipulatives, solving puzzles, or participating in active games, every aspect of the Math The Multiplication And Division Strategy Based Multisensory Fitness Game is purposeful and impactful.

Benefits of using the Math The Multiplication And Division Strategy Based Multisensory Fitness Game

The Math The Multiplication And Division Strategy Based Multisensory Fitness Game offers numerous benefits for students:

1. Improved Understanding:

By engaging multiple senses and incorporating physical movement, the game helps students understand math concepts more deeply and intuitively.

2. Enhanced Memorization:

Regularly practicing math strategies through the game helps students reinforce their memory and recall of multiplication and division facts.

3. Increased Motivation:

Traditional math learning can often be boring, leading to a lack of motivation. The game injects fun and excitement into the learning process, encouraging students to stay engaged and motivated.

4. Better Problem-Solving Skills:

The Math The Multiplication And Division Strategy Based Multisensory Fitness Game requires students to think strategically and solve problems effectively, enhancing their critical thinking abilities.

5. Collaborative Learning:

The game can be played in groups, promoting collaboration and teamwork among students. This fosters a positive learning environment and encourages students to learn from one another.

Is the Math The Multiplication And Division Strategy Based Multisensory Fitness Game suitable for all age groups?

Absolutely! The Math The Multiplication And Division Strategy Based Multisensory Fitness Game is designed to cater to students of all ages, from primary school to high school. The activities and exercises can be adjusted to suit different skill levels, ensuring that every student benefits from this innovative approach to math learning.

If you're tired of traditional math learning methods and want to make math more enjoyable and engaging, give the Math The Multiplication And Division Strategy Based Multisensory Fitness Game a try. With its unique blend of physical exercise, strategic thinking, and multisensory activities, this game is guaranteed to boost your math skills and make learning a whole lot of fun!

With some schools not opening up in person for a year, missed attendance due to sickness or an isolation period, hands on learning being nonexistent, and the upcoming summer break arriving quickly, it does not surprise me that many elementary aged children throughout the country are behind in math. How can we be proactive in helping the ones we love with this concern? How can we prevent

students from forgetting their math facts? How do you challenge young kids who have mastered their addition and subtraction facts? Carve out 15 minutes a day playing Math 5 the Multiplication and Division Strategy Based, Multisensory, Fitness Game. Be a math coach to your special child and invest 15 minutes a day into him or her. You will never regret having that one on one time quality time together.

In my 25 years in the educational field, I have often pondered the following questions: How do you get children to learn math facts? How can students achieve in math if they do not know the math facts? What is the solution to solve this problem in the most cost effective, time related matter? Upon reflection, I realized that kids, like adults, are motivated best by doing fun activities with people they like and earning incentives. I thought that if I created a math fact game disguised with fun, children would hopefully see the game as meaningful. Children would be able to file the newly learned math facts from their short-term memory to their long-term memory by using strategies and practicing. The first reason I like this game is because children interact with friends and family instead of a computerized system. Face it, with the 2020 pandemic, although doable, it is more difficult for all students to learn virtually rather than in person . This is comparable to handing your toddler or baby an electronic device to hear a story instead of having Mom, Dad, Grandma, or Grandpa read it to him or her in person. For this same reason, students learn best, are more motivated, and maintain a higher level of focus by interacting with parents, math coaches, and/or peers in person. The second reason I like this game is because it gives one child, a small group of 1 to 4 children, or four small groups of students an opportunity to actively engage in learning his or her math facts with social distancing options if preferred. The third reason I like this game is there is something enjoyable for every child through visual, auditory, kinesthetic (movement),tactile (touch),smell, and taste sensory learning activities built into the game. The last reason I like the game is that everyone learns at his or her own rate; slow and steady wins the

race.

This game incorporates multiplication and division facts with cardiovascular, strength training, flexibility, balance, and free choice interest exercises. Activities include the following: square jump or body percussion, basketball dribble or floss dancing, elastic stretchy band or individual jump roping, drawing or dividing arrays, counting, "Math Bee," plank the facts, and speedy shuffle activities. There is something in this game that every child will enjoy! Math 5 the Multiplication and Division Strategy Based, Multisensory, Fitness Game is priceless yet affordable! Have Fun! Get Fit! Love Learning!
