These aquariums typically range from 10 to 30 gallons in size and are designed to recreate the beauty of a coral reef within a smaller space. While small in size, they require just as much care and attention as larger setups to maintain a thriving ecosystem.

Creating a successful small marine aquarium requires a delicate balance of water chemistry, lighting, filtration, and careful selection of marine species. It is a testament to the skill and artistry of Hannah Richter that she is able to create such breathtaking underwater wonderlands within these miniature confines.
